

AWS S3 Static Website Hosting – Documentation

1. Project Title

Static Website Hosting using Amazon S3

2. Objective

The objective of this project is to host a static website using **Amazon S3 (Simple Storage Service)**. The website is built using basic HTML files and hosted publicly without using any traditional web server.

3. AWS Service Used

- Amazon S3 (Simple Storage Service)

4. Project Details

- **Bucket Name:** `smrithis3163`
- **Files Uploaded:**
 - `index.html`
 - `error.html`

5. Project Structure

`index.html`

`error.html`

6. Steps Followed to Host Static Website

Step 1: Create S3 Bucket

1. Open AWS Management Console
2. Navigate to **S3 service**
3. Click **Create bucket**
4. Enter bucket name: `smrithis3163`
5. Select nearest AWS region
6. Disable **Block all public access**
7. Confirm warning checkbox
8. Click **Create bucket**

Step 2: Upload Website Files

1. Open bucket `smrithis3163`
2. Click **Upload**
3. Add the following files:
 - `index.html`
 - `error.html`
4. Click **Upload**

Step 3: Enable Static Website Hosting

1. Go to **Properties tab**
2. Scroll to **Static website hosting**
3. Click **Edit**
4. Enable hosting
5. Set:
 - **Index document:** `index.html`
 - **Error document:** `error.html`
6. Save changes

Step 4: Configure Bucket Policy (Public Access)

1. Go to **Permissions tab**
2. Open **Bucket Policy**
3. Paste the following policy:

```
{
  "Version": "2012-10-17",
  "Statement": [
    {
      "Sid": "PublicReadGetObject",
      "Effect": "Allow",
      "Principal": "*",
      "Action": "s3:GetObject",
      "Resource": "arn:aws:s3:::smrithis3163/*"
    }
  ]
}
```

Step 5: Access Website

1. Go to **Properties → Static Website Hosting**
2. Copy the **Bucket Website Endpoint**
3. Paste it into a browser

7. Output

- `index.html` loads as the homepage
- Invalid or missing pages display `error.html`

8. Key Features

- Serverless website hosting
- Highly scalable and reliable
- Low cost
- Easy deployment using AWS S3

9. Conclusion

This project demonstrates how a static website can be successfully hosted using **Amazon S3 bucket `smrithis3163`**, without requiring any backend server. It is a simple and efficient method for hosting static web applications.
